

Safety Guard Rail System

Installation Manual

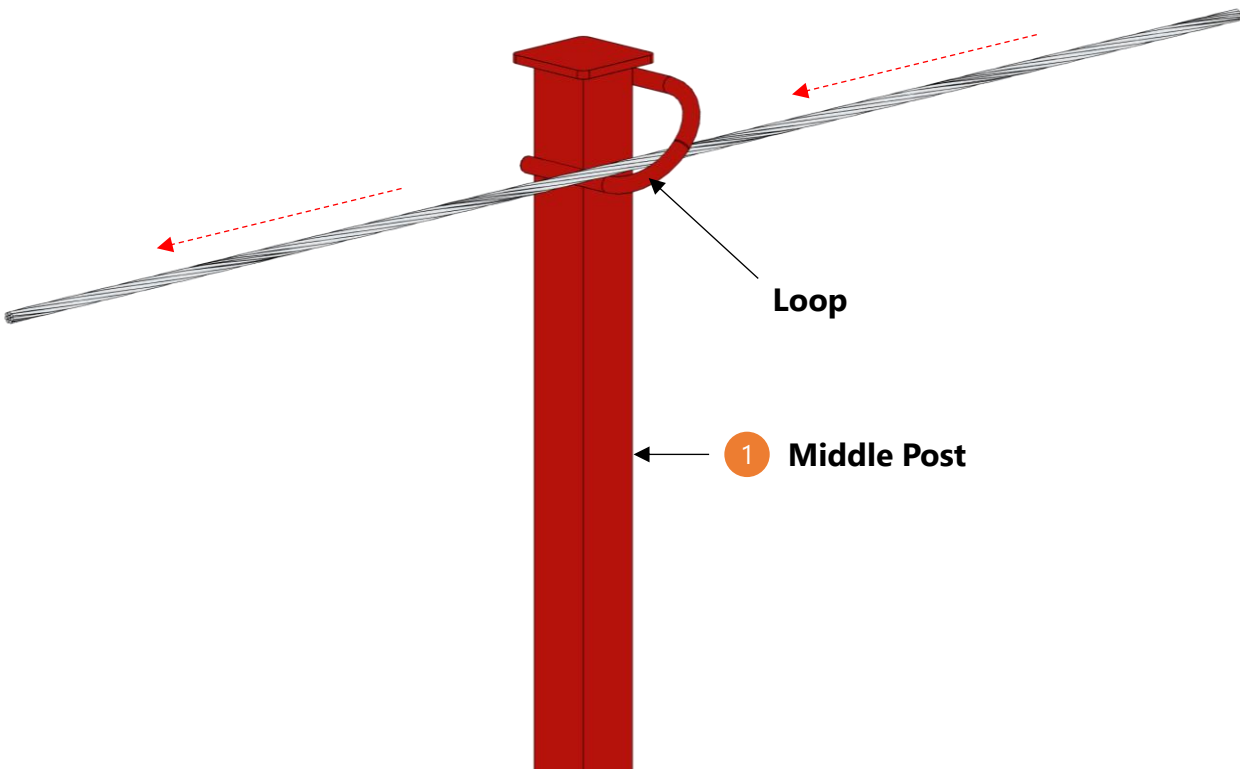

- Component**
- | | |
|------------------|-----------------|
| 1. Post and Loop | 4. Cable |
| 2. Yolk | 5. Thimble |
| 3. Turnbuckle | 6. Crosby Clamp |

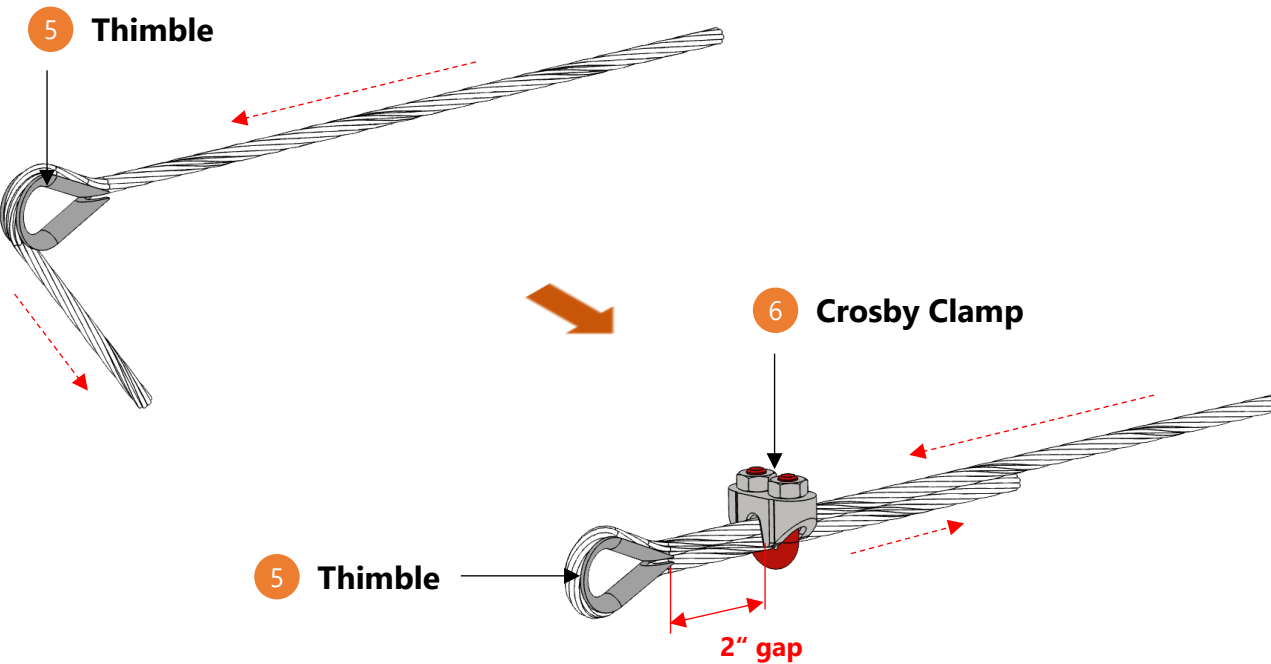

1 Connect the Turnbuckle to the Loop on the first Post. Leave 2 inches of room to tighten for the last step.

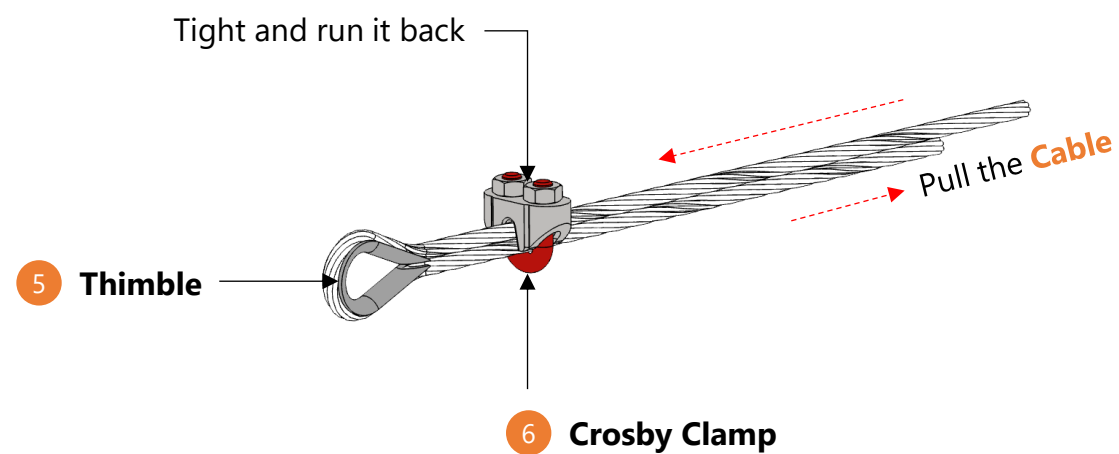

2 Run cable through Loops on the middle Post.

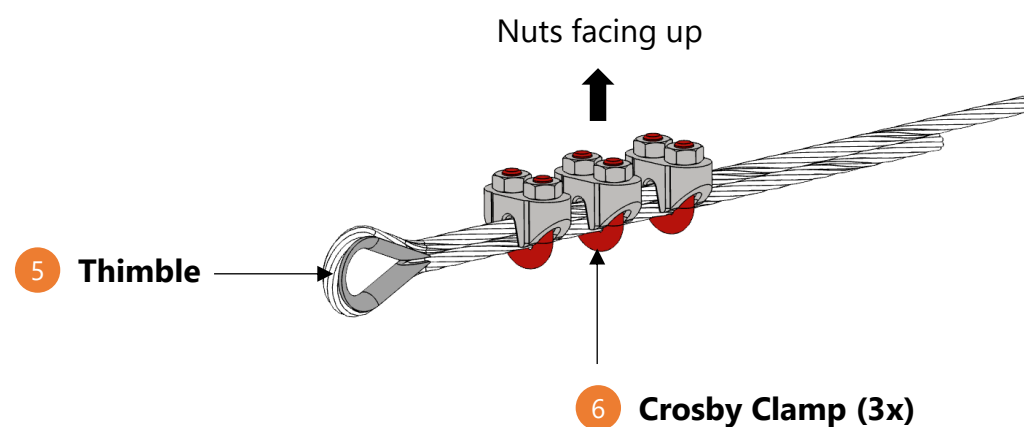

3 At termination, wrap the cable around the Thimble. Add a Crosby clamp starting about 2 Inches away from the Thimble.

4 Pull the cable hand, tight and run it back along itself.

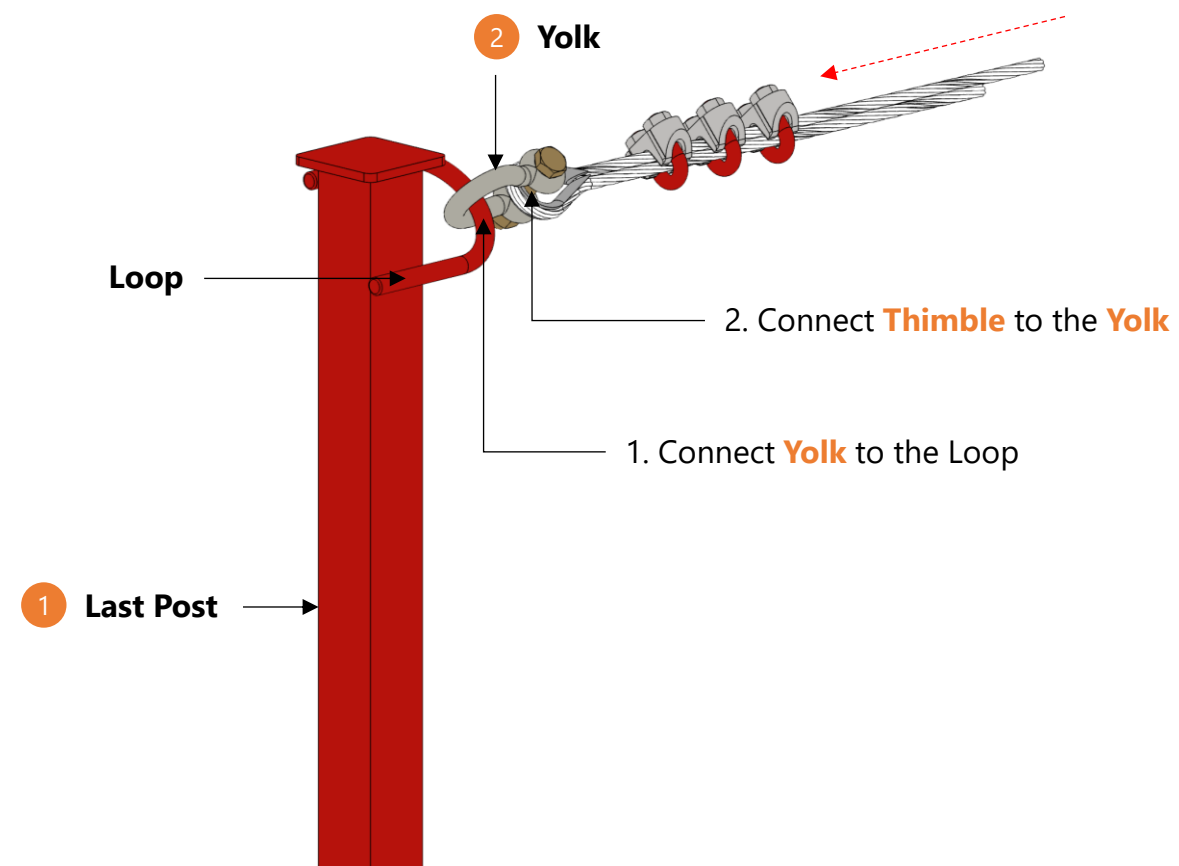

5 Attach three Crosby clamps 1/2 inch apart, nuts facing up along the live end (never saddle a dead horse).

Note: If there's any extra cable or the cable is too long, you can wrap it up and tape it to itself.

6 Connect a Yolk to the Loop on the last Post, and connect the Thimble to the Yolk.

7 Go back and fully tighten the Turnbuckle on the first Post.
