To Whom It May Concern:

Re: Metro Safety Rail — Reference

I am pleased to provide this reference for the Metro Safety Rail system.

During my time as a Site Superintendent with Cove Properties, we used the Metro Safety Rail guardrail system across three towers in Calgary. Throughout that work I found it to be an easy and safe railing to install and, just as importantly, straightforward to move up to the upper floors as construction progressed. We deployed it both on its own and in combination with safety nets, and it performed reliably in both configurations.

It was a pleasure to reconnect with Dale on a system we relied on, and I have no hesitation recommending it. I wish the team continued success with their new, upgraded product, and I fully intend to get in touch for railing on our next project.

Sincerely,

Vladimir Tsatsko
